Up to 200 MS/s

High-speed

Sampling

Highest Sampling Speed in the Entire Series

· High-speed isolation measurement at 200 MS/s · Up to 16 analog channels & 12-bit ADC resolution

The Hioki Memory HiCorder lineup now includes a powerful input unit that unlocks the full measuring potential of the MR6000.

The High Speed Analog Unit U8976 boasts the highest sampling rate in its entire series, an order of magnitude faster than conventional models, enabling the unit to perform isolated measurement at 200 MS/s.

(200 MS/s measurements can be achieved even if a unit other than the U8976 is connected at the same time. However, the data update rate will not exceed the maximum sampling rate of the other units.)

High Speed Analog Unit U8976

Blazingly fast, Sampling that never fails

The High Speed Analog Unit U8976 delivers a 30 MHz frequency band in addition to high-speed sampling at 200 MS/s. It has the performance needed to accurately capture switching waveforms during inverter evaluation testing, an application where high efficiency is critical. Adapted to the Memory HiCorder's direct input feature, it can accept inputs of up to 400 V DC.

Used in combination with the 10:1 Probe 9665

If you encounter issues with the capacitance components of connection cords, use the 10:1 Probe 9665 to reduce the effects on measured waveforms.

*For more information about frequency deratings, either consult the user manual that comes with the 9665 or contact Hioki.

Safer due to channel-to-channel optical isolation

Connections between analog input channels, and between the input channel and the main unit, are fully isolated. This means that, unlike an oscilloscope, measurements can be made without concern with negative effects from voltage

differences. This is because connections between analog input channels, and between the input channel and the main unit, are fully isolated.

Fastest Save Processing in the Entire Series

· Radically improved data saving time

· Stress-free user experience

Transferring very large amounts of data measured over a long period of time used to be very time-consuming. The MR6000 features a brand new interface and faster internal processing, reducing the time required to save measurement data to media. For example, a save operation that took 1 minute on the previous model now completes in 2 seconds. This saves you the trouble of waiting for data to be saved and improves work efficiency.

revious Mode

Longest Continuous Recording in the Entire Series

· Long-term recording and high-speed sampling in multiple channels

· Instant analysis of measurement results

You can control the available measurement time by using the real-time save function and an additional storage media.

For long-term recording, we recommend ordering the MR6000 with a built-in high-capacity SSD or HD unit. You can also use a more convenient USB memory stick or SD memory card. All phenomena can be recorded at a high sampling rate over a long period of time.

Saving data directly to your PC

Transfer measurement data directly to your PC by using the FTP sending function or network drive function together with the real-time save function. This makes it easier to observe data after the measuring process.

An Extensive Line of Units for Detecting a Wide Range of Phenomena

Combine multiple units to record a range of phenomena. Use multiple logic units to measure relay ON/OFF signals or PLC (programmable logic controller) signals across up to 128 channels simultaneously. You can also measure temperature by attaching a thermocouple to a temperature unit.

Simultaneously measure up to 32 channels

4ch Analog Unit U8975

The U8975 accepts direct input of up to 200 V DC across 4 channels. With a sampling rate of 5 MHz (across a frequency band of 2 MHz), high speed, and 16-bit resolution, it can perform multi-channel, high-speed, and high-resolution measurement.

Simultaneous measurement of multiple locations across 32 channels at 5 MS/s

Record frequency fluctuation and pulse count/integration data

Frequency Unit 8970

Use the Frequency Unit 8970 to record measured waveform frequency, RPM, input pulse integration, duty ratio, and pulse width variations. It can accommodate numerous applications, including measurement of motor RPM, vehicle speed, and power supply frequency fluctuations. Thanks to a maximum input voltage of 400 V DC, it can also directly measure 3-phase circuit carrying up to 200 V.

Direct, high-voltage input without differential probes

High Voltage Unit U8974

The U8974 is ideal for measuring the primary and secondary sides of UPS power supplies and commercial power supply transformers. It can measure high-voltage power lines, including 380 V and 480 V circuits found in many countries. With high-speed sampling at up to 1 MS/s and 16-bit resolution, it can also be used in load rejection testing and switch testing.

Analyze correlations between phenomena, including voltage levels before and after generator disconnection, RPM fluctuation rates, governor servo operating status, and voltage governor switching timing.

Specifically designed for DC voltage measurement with extremely high precision and resolution

Digital Voltmeter Unit MR8990

The MR8990 can measure minuscule fluctuations in sensor output of automobiles and voltage fluctuations in batteries, both at high precision and resolution. It can accommodate maximum input of 500 V DC. This high input impedance allows you to measure the battery voltage without being concerned about leakage current. Additionally, the amount of space taken up by instruments can be reduced by replacing a bench-style DMM with the MR6000. Systems can be simplified by eliminating the need to control multiple instruments.

Battery

Battery pack

Simultaneously measure up to 32 channels at high resolution

4ch Analog Unit U8978

Thanks to four input channels and a high-sensitivity 100 mV f.s. range, the U8978 can measure multiple channels of output from a variety of sensors. The unit is ideal for use in measuring currents of various magnitudes in the development of automobile accessory controls. Utilized in combination with the multi-range Current Probe CT6711, it can measure currents from 1 mA to 50 A.

Observe minuscule currents using high-sensitivity wideband current probes

Current probe lineup

Analyze minuscule current waveforms from low-powerconsumption devices in 100 µA resolution. Record device current consumption waveforms in high resolution over extended periods of time.

Current consumption waveform for a temperature and humidity sensor

High-speed sampling lets you accurately measure inrush current

High-Speed Analog Unit U8976

Combine the High-Speed Analog Unit U8976's 30 MHz frequency band with the Current Probe CT6711 to measure inrush currents and minuscule currents.

Power can be supplied from the MR6000.

Power can be supplied to current probes by using the Power Probe Unit Z5021.

Hioki offers a wide range of current probes to suit all frequency band and rated current needs.

Single solution for 3-phase current measurement 3ch Current Unit U8977

The U8977 delivers a sampling rate of 5 MS/s, frequency characteristics of 2 MHz, 16-bit A/D resolution, and DC accuracy of 0.3% f.s. to facilitate wideband, high-precision current measurement using Hioki current sensors.

Automatic configuration of sensor scaling values

When you connect a current sensor, the MR6000 will automatically detect the model and set the appropriate scaling value.

Connect sensors directly

Power is supplied from the current unit

Since current sensor power is supplied directly from the current unit, there's no need to provide a sensor power supply.

Compatible with high-precision sensors for measuring large currents

Current sensor lineup

Clamp-type high-accuracy sensors deliver excellent temperature characteristics, allowing highly accurate measurements to be made even in the confined space of a vehicle's engine compartment.

Sensitivity variations of high-accuracy clamp-type sensors caused by temperature

Zero-point stability

Wideband flux gate technology delivers high zero-point stability over extended periods of time.

Hioki offers a wide range of current sensors to suit all frequency band and rated current needs.

CAN/CAN FD Measurement, LIN Measurement

CAN buses carry not only control information, but also sensor information required by the ECU for control purposes. Analog values for sensor input signal quantities such as voltage, strain, temperature, flow rate, RPM, torque, vehicle speed, and vibration can be measured at the same time as these signals.

Capture all data on the CAN and LIN bus during measurement

The MR6000 captures all frame data on the CAN or CAN FD bus and LIN bus during the set recording time. After measurement, you can specify the signals you wish to check and display them on the screen.

Choose signals to display after measuring all bus signals

Real-time Waveform Processing Function

Real-time waveform processing

Exclusive MR6000-01 feature

Calculate measurement data during measurement

The MR6000-01 further features powerful technology designed for robust real-time waveform processing. This function performs arithmetic (addition, subtraction, multiplication, and division), differentiation calculations, or integration calculations during the measuring process, letting you check the calculated results via waveforms while measuring or monitor starting from set triggers. Results can be further processed after measurement and saved.

V1	Comment	addition	
Dn	Formula	(CH(1, 1)) + (CH(1, 1))	
V2	Comment	sabtraction	
Dn	Formula	(CH(1, 1)) - (CH(1, 1))	
νз	Comment	multiplication	
Dn	Formula	(CH(1, 1)) x (CH(1, 1))	
V4	Comment	division	
	Formula	(CH(1, 1)) / (CH(1, 1))	

Use calculation results as triggers

For example, you can calculate a differential waveform for input signals in real time and apply a trigger based on it. You can detect the timing of an input signal's local maximum and minimum values and output an external signal from the TRIG.OUT terminal.

Real-time waveform processing option

Digital filter calculations

Exclusive MR6000-01 feature

Observe clear waveforms without noise

Remove harmonic noise or specific frequency noise from measurement data Use it to eliminate the noise that cannot be resolved with the standard filter installed in the unit.

Long-term Recording Functionality

In addition to the real-time save function, the MR6000 provides a range of functionality for extended recording.

Envelope function

Observe fluctuations over the long term with high-speed sampling

The system uses the envelope measurement method to record maximum and minimum values at set intervals while performing oversampling at 100 MS/s. The internal memory has a capacity of 1 G-words, which ensures that the measuring process can continue for a long time without any data loss. Save data in real time while measuring

MR8990 is in use, and when performing real-time waveform processing.

Dual sampling function

Measure anomalies during extended testing with high-speed sampling

In vibration testing, it's necessary to record comprehensive test data for several hours. At the same time, it's necessary to capture areas of the waveform where anomalies occur with high-speed sampling for analysis once measurement is complete. The dual sampling function is useful in such situations.

(1) Record the entire trend waveform

Use the envelope function to record comprehensive test data for several hours.

(2) Check details with the instantaneous waveform

Anomalies occurring during the test will be captured with high-speed sampling based on triggers that have been set up in advance. By tapping on a trigger mark's number, you can display the instantaneous waveform for the anomaly that occurred at that waveform area.

11/15/2019 1 1 Map

Tap to enlarge the anomaly waveform

Verify that no anomalies occurred during extended testing

No trigger marks

If no instantaneous waveform triggers activated, there were no anomalies. By viewing the trend waveform, you can not only verify that no anomalies occurred, but also check whether the device under test operated properly.

Trigger Function

Triggers that detect targeted events

Set triggers on any channel to record data whenever an event occurs. Triggers can be set for all channels.

Trager ON	Level trigger	Compares to one voltage value
Start - Pre-Stoper 6% - Stater - Pres-Stoper 6%	Window trigger	Compares to two voltage values
Tigger	Voltage drop trigger	Detects voltage drops in commercial power lines
OR OR Tipper activition	Period trigger	Monitors periods
Interval trigger	Glitch trigger	Detects anomalies in pulses
Simple trigger system diagram	Pattern trigger	Compares when the logic signal is ON/OFF

Setting multiple triggers for a single channel

Set up to 4 triggers for a single channel. If, for instance, you set the glitch, level, window-in, and window-out triggers for the same input waveform, that waveform is monitored according to the set trigger conditions.

Display Functions

Numerical display function

This function is effective for checking the status before and during measurement.

Displays the measured value and the waveform at the same time.

Sheet function (display group)

The instrument supports 3-, 6-, and 9-segment screen displays, allowing measurement results for 3-phase circuits to be displayed efficiently

Scroll function

You can use the scroll function to check the waveform as if viewing it on paper.

Zoom function

The zoom function allows you to display all measurement waveforms on a single screen in the manner of an oscilloscope and to view desired locations in greater detail.

Compressed display of entire recording length

19 screen

types

Enlarged display of desired portion of waveform

Waveform Search Function

Easily search for waveforms in huge volumes of measurement data

Memory HiCorder Concierge function

The Memory HiCorder Concierge function automatically calculates the characteristics of a reference waveform set by the customer and then searches all measured data while identifying waveforms that do not resemble the reference waveform as anomalous waveforms. This drastically reduces the amount of time required to search for anomalies by eliminating the need to scroll through measured waveforms and checking them visually.

Additionally, this function is ideal for situations where it is difficult to set the right triggers before measuring because the nature of potential anomalies cannot be predicted.

reference waveform

Automatically search for waveforms with low similarity to the reference waveform

Peak search

Search for the maximum value, minimum value, local maxima, or local minima in all of the measured data, and mark the search point in the waveform.

Trigger search

Set trigger conditions for all of the measured data after measurement to search for points where the conditions are fulfilled, even if no triggers were set before the measuring process.

Jump

Jump to an event mark you made while measuring, to the cursor position on the display, or to the measured data of a specified time.

Waveform Generation Function

Achieving the dual role of generation and recording with a single unit

The arbitrary waveform generation function and waveform measurement function are realized by one Memory HiCoder.

Waveform output as expected ARBITRARY WAVEFORM GENERATOR UNIT U8793

Waveform observation while changing test conditions, such as changing the signal type, amplitude and frequency, and programming various waveforms to output them sequentially, can be made easier.

Output waveform example

Anomaly Simulation

Reproduce and output the observed waveforms without modification. When resolving problems observed during research or development, you can reproduce such problems for efficient testing. For example, you could output actual waveforms recorded from a car without modification, and then use them for standalone testing. You can also generate isolated output of up to 15 V while varying the signal's amplitude and frequency without using a generator or amplifier, which is traditionally necessary. For example, you can create a power waveform such as power supply dips, instantaneous interruptions, and voltage fluctuations to use in an immunity test (to cause malfunctions in equipment caused by power supply harmonics).

Simultaneous measurement of a motor inverter's mechanical signals and power

The MR6000 can perform power measurement, which provides an effective means of evaluating the mechanical operation and electrical characteristics of equipment such as motor inverters. The instrument's power calculation function can display power values that change in small amounts of time on a cycle-by-cycle basis.

Display of voltage, current, and power trends

When measuring voltage and current after configuring power calculation settings, the instrument automatically performs waveform calculations and displays power values. In addition, it can display calculation results after measurement if you configure the power calculation settings.

Example display of power calculation results

Cycle-by-cycle calculations

The instrument performs calculation processing for each cycle, defined as the interval from one zero-cross point to the next zero-cross point, based on the waveform chosen as the reference channel.

Power calculations based on detected cycles

Supplying power from the instrument

When a Hioki high-precision current sensor is directly connected using the 3CH Current Unit U8977, the instrument automatically detects the sensor. (There is a limit on how many sensors can be connected.)

When measuring high voltages, the instrument can supply power to up to eight Differential Probe 9322 units using the Power Cord 9248 and the Probe Power Unit Z5021.

Simple settings screen

A dedicated screen makes it easy to configure settings for power calculations, including wiring method and voltage and current channels.

No need to register detailed power equations

Rotation angle measurement functionality

Measurement of resolver rotation angle

Using the waveform calculation function, the instrument acquires three channels of data (resolver excitation signal, cos , and sin) and generates a trend display for the motor's rotation angle.

Measurement of rotary encoder rotation angle

Using the waveform calculation function, the instrument acquires the A, B, and Z pulse signals from the rotary encoder and generates a trend display for the motor's rotation angle.

*Only incremental method is available. Absolute method is not available.

Example of resolver signal measurement

Applications Time Measurement By performing numerical calculations on measured waveforms, you can perform analyses using numerical parameters. Not only analog channels and logic channels, but also results of the real-time waveform calculation function can be used in this calculations.

Calculating switching times measured using logic channels (t1, t2, t3, T)

You can calculate time differences by applying numerical calculations to signals measured with logic channels.

Calculate the time difference T (s) at which waveforms A and B cross the specified level when either rising or falling.

Time difference T = Waveform B (time at which levels cross) - waveform A (time at which levels cross)

Reference channel (waveform A) calculation settings:	Level	Slope	Filter	
Calculation target channel (waveform B) calculation settings:	Level	Slope	Filter	

Trigger time	12:00.0
No. 1 time difference (t1)	1.50 s
No. 2 time difference (t2)	2.00 s
No. 3 time difference (t3)	1.00 s
No. 4 time difference (T)	4.50 s

Measurement waveforms and desired time differences

Example above: numerical calculation results

Calculating the time that elapses until a reading falls from the maximum value to a defined level (e.g. 50 V) after a capacitor is charged during capacitor charge/discharge testing

You can calculate the defined value by calculating the time at which the maximum value occurs and the time at which the specified level occurs using numerical calculations and then performing your desired arithmetic operations.

Calculating the motor inrush starting current time (t1)

You can derive the desired time by calculating the burst width using numerical calculations.

Calculate the time at which the burst signal is output

Calculate the duration of an oscillating signal, for example the inrush current when a motor starts operating, as the burst width.

Calculation settings:	Filter	Statistics			
	Burst end filter				
	Window (upper limit, lower limit)				

Available calculation functions

Numerical calculations Perform up to 32 of 34 available calculations simultaneously during measurement.

Average value	Minimum value	Rise time	Specified level time	Pulse count	High level	Overshoot	Burst width
RMS value	Time-to-minimum value	Fall time	Specified time level	Arithmetic operation	Low level	Undershoot	Integration values
Peak-to-peak value	Period	Area value	Pulse width	Time difference	Median value	+ Width	X-Y waveform angle
Maximum value	Frequency	X-Y area value	Duty ratio	Phase difference	Amplitude	Width	CAN statistics
Time-to-maximum value	Standard deviation						

Using a strain-gage-type converter or acceleration sensor, you can measure torque and vibration during motor operation. Discover unpredicted frequency components by using FFT calculations to perform a frequency analysis.

Record torque and vibration during motor operation

Simultaneous measurement and instantaneous analysis

The torque sensor (strain-gage-type converter) is connected to the Strain Unit U8969 to measure torque.

An acceleration sensor affixed to the chassis on which the motor is mounted, is connected to the Charge Unit U8979 to measure vibrations being transferred to the chassis.

The MR6000's FFT calculation function can be used to perform a frequency analysis of torque and vibration signals.

Available calculation functions

FFT calculation function

The MR6000 can analyze 8 phenomena simultaneously per measurement. Multiple FFT analyses of signals input from different channels let you investigate the frequency components that appeared for each channel at a single point in time. Similarly, conduct a variety of analyses for a single signal simultaneously.

FFT calculation 4-split screen

FFT analysis directly from the measured data

Perform FFT analysis from measured data. Simply touch the screen to specify the starting point for analysis, while simultaneously viewing the calculation results.

*1 Strain-gage-type converter *2 Charge-output-type with built-in pre-amp (IEPE type) (For more information about sensors, please contact the sensor manufacturer.)

Applications Measurement of Dynamic Motor Characteristics

By using the X-Y display function with RPM on the X-axis, you can analyze fluctuations in torque, motor power, motor efficiency, and inverter output power for each RPM level

Motor efficiency - Rotation Motor power — Torque Inverter output Start Increasing RPM Stop Stop Decreasing **RPM** 1Nm 1 2.5N 3 Z11 H2-4 Inverter output power Motor efficiency Torque Motor power RPM RPM

Record fluctuations in various parameters from motor's start to stop

All-in-one measurement + pinpoint analysis

The signal from the torque sensor (Strain-gage-type converter) is measured with the Strain Unit U8969. Output from the motor's encoder (e.g. A-phase) is connected to the Frequency Unit 8970 to measure RPM.

The 3-phase inverter's voltage is measured using the 4ch Analog Unit U8978 and the Differential Probe 9322.

The 3-phase current is measured using the 3ch Current Unit U8977 and current sensors. Motor power, motor efficiency, and inverter output power are calculated after measurement using high-speed waveform processing, and the results are displayed using the instrument's X-Y display function.

Compositing over the specified X-Y interval

You can choose locations and generate an X-Y display of fluctuating waveforms from motor start to motor stop.

Available display functions

X-Y display function

The MR6000 provides an extensive range of X-Y displays for captured waveforms, including an X-Y 1-screen display, X-Y 2-screen display, X-Y 4-screen display, and time series display + X-Y 2-screen display. The ability to use the X-Y display for waveform processing results as well as input signals from measurement units means that you can perform a broad range of analyses.

З

4-screen X-Y display

Products used

XY waveform angle and area values

You can use the numerical calculation function on the X-Y display. Calculate XY waveform angle and area values using the numerical calculation function while viewing the X-Y display.

З

- *1 The 4ch Analog Unit U8975 can be used when measuring voltages of 100 V AC or less.
- *2 Strain-gage-type converter (for more information about the sensor, please contact the sensor manufacturer.)

Software

Load data measured with the MR6000/ MR6000-01 onto a PC to display waveforms and perform calculations

Intuitive	Waveform	FFT
operation	processing	calculations
I Itilize functionality si	milar to that provided	by the MR6000 on

a PC, including numerical calculations, waveform processing, and FFT calculations. (Some restrictions apply.)

Supported models	MR6000, MR6000-01
Supported operating system	Windows 10 (64-bit) For other system requirements, please see the user manual.
Availability	Free download from the Hioki website

Waveform display zoom

Zoom each axis in or out by spinning the mouse's scroll wheel while placing the cursor over either the left or bottom of the screen.

Functionality similar to the MR6000

me as instrument functionality and usability

You can display data, change settings, perform calculations, and save data in the MR6000 Viewer.

Ideal for creating reports

Copy a screenshot of the waveform screen to the clipboard.

Register waveform formulas and perform calculations

Formula: RSLV(CH(1,1),CH(1,2),CH(1,3),1)

Wave Processor 9335 (sold separately)

The 9335 provides waveform display, processing, and printing functionality.

Comparison with other Hioki software

Software	MR6000 Viewer	Wave Processor 9335
Waveform screen	Yes	Yes
Trace cursor	Yes	Yes
Saving	.csv, .txt, .set, .bmp, .png, .jpeg, binary, .flt	.csv, .txt
Settings	Yes*1	No
Printing	No	Screen image, detailed printing
Numerical calculations	Yes	Yes
Waveform processing	Yes	No
FFT calculations	Yes	No
X-Y display	Yes	Yes
Supported operating systems	Windows 10 (64-bit)	Windows 10, Windows 8, Windows 7 (32-bit, 64-bit)
Price	Free	Varies with region

*1 After loading waveform data, you can edit settings and create settings files.

Bringing Field Measuring Results to Your PC

Simultaneous Observation of Data from Multiple Instruments

			23900-000	
Data collection	Real-time performance	Batch display and saving		Hub
GENNECT One lets yo	u display and save	data in real time on a	-000	
PC during measureme	nt. It also serves as	a useful tool in		
measurement applicati	ons that include oth	ner instruments.	Co	onnect to instruments via a LAN.
Supported models	MR6000, MR60	00-01, etc.		
Supported operating sys	tem Windows 7 (32-k Windows 10 (32	bit / 64-bit), Windows 8.1 -bit / 64-bit), Windows 11	(32-bit / 64-bit) 1	
Availability	Free download f	rom the Hioki website		

Simultaneous, real-time observation

GENNECT One lets you display data from multiple instruments together and in real time in list or graph form.

LAN remote control function

Change instrument settings and control operation, for example to start or stop measurement.

Example remote control screen

Commercially available software

FAMOS

 More than 400 calculation processing variables
 Easy report creation functionality Download a free MR6000 import filter free of charge from Hioki's website.

FlexPro

- High-speed search and processing of large volumes of data
- Share analysis templates inside your company

NI DIAdem

 Functionality ranging from searching and loading of data to analyzing and creating of reports
 Dialog-based interface

OS-2000

- Freely edit large data that cannot be handled by Excel
- Simultaneously display the waveforms which have different frequencies

Control scripts and drivers

On Hioki's website, search for "MR6000" > "Downloads" > "Drivers, Firmware & Software" to find downloadable drivers.

MATLAB

Available scripts allow you to directly load waveform data measured and saved using the MR6000's memory function, while control scripts let you start and stop measurement, acquire measurement data, and configure measurement settings.

LabVIEW

An available driver lets you control the MR6000 and acquire measurement data. The driver was created using LabVIEW 2009 sp1, and it has been confirmed to operate with LabVIEW 2017.

Multifunctional Interface

Open or close the top panel of the main unit Z4006 USB DRIVE installable

Only 6 keys in total New recorder design

Use the touch screen to configure all the basic settings.

Rotary knob Y For changing the position and zooming the waveform in and out START button To begin the measuring process

STOP button For importing the set recording length and stopping the measuring process

Power button For turning the power on or off

USB 2.0 connector × 2 For connecting a USB memory stick, USB mouse, or USB keyboard

USB 3.0 connector × 2 For connecting a USB memory stick, USB mouse, or USB keyboard

Versatile

For connecting to a network via LAN cable

DVI terminal For outputting the screen display External sampling terminal For inputting various external sampling signals

19

22

External control terminal For inputting various external signals to control the device

Dedicated power supply terminal for current sensors For supplying power to current sensors (option)

Various units Install input units appropriate for the measurement target

Air inlet For reducing the internal temperature

Media box For USB 3.0 connectors (USB memory sticks only)

Operability and visibility suited for a variety of work environments

Ergonomical operating angle

ΗΙΟΚΙ

Our search for a touch screen with the best operability and visibility angle led us to develop retractable feet that maximize those two important attributes. Tilting the MR6000 with the feet reduces the strain on your wrists when you use the device on a desk, and keeps your line of sight at a natural level.

Easy handling

The rubber handle boasts excellent grip and makes it easy to carry the device with either one or both hands. The grips on either side of the device can also be used to lift it with both hands.

2.0

MR6000

MEMORY

Space-saving size

We have achieved a design that is compact while still delivering blazing fast processing speeds by using thermal liquid analysis to optimally position the air inlets, heating components, and cooling fans.

Sleek design

The beveled corners of the Memory HiCorder's body gives the device a compact and sleek look. This simple and refined appearance is sure to be a strong addition to the creative environment of any R&D workspace.

Product Specifications

(Accuracy guaranteed for	1 year)	
	Normal: Regular way	veform recording
Recording method	Envelope: Periodica *Envelope setting no	ly recording maximum and minimum values
necoluling method	Dual sampling: Reco	ords waveforms at a sampling speed different from the
	envelope sampling	speed during envelope measurement.
	Analog with up to 32	channels (with 4ch ANALOG UNIT U8975/U8978)
No. of channels	*Common GND for t	he logic probe input connector and main unit

Output terminal for	probe correction	signals
Output signals	0 V to 5 V ±10%, 1 k	Hz ±1% square waves
Dedicated power s	upply terminal for	current sensor
*Option to be specified u	ipon order placement (with PROBE POWER UNIT Z5021 installed)
Output voltage	8 ± 12 V ± 0.5 V DC	
Trigger *Not available	when the real-time say	re function is used
Trigger type	Digital comparison t	уре
Trigger conditions	AND or OR condition	n for trigger sources and interval trigger
Trigger source	When START or ST "Up to 4 analog tri "Up to 4 logic trigg "Up to 2 analog trigg "Up to 2 analog trigg "Up to 2 analog trigg When START&STO Analog: Up to 16 cl Logic: Up to 16 cl Logic: Up to 16 pr Real-time waveform "Up to 2 trigger trigg External trigger	DP is selected: Up to 32 channels ggers can be set for each analog channel. gers can be set for each logic probe. Jers can be set for each logic probe. Jers selected: Up to 16 channels / group nannels / group (Up to 2 channels per unit can be selected.) obes / group (Up to 2 probes per unit can be selected.) obes / group (Up to 12 channels per unit can be selected.) norcessing: Up to 16 calculations / group pes from each group can be set for each analog channel. gers from each group can be set for each logic probe.
	Level trigger	Triggering occurs when the set level rises (falls).
	Voltage drop trigger	Triggering occurs when peak voltage drops below the set level. (For a 50 Hz / 60 Hz commercial power supply only) *1, *2, *3
	Window trigger	Sets the upper and lower limit for trigger level. Triggering occurs when leaving (OUT) or entering (IN) the area. *1
Analog triggers	Period trigger	Sets the period reference value and cycle range. Triggering occurs when the rising (falling) reference value period is measured and determined to be outside or within the cycle range. *1, *2, *3
	Glitch trigger	Sets the reference value and pulse width (glitch width). Triggering occurs if the value is below the set pulse width from rising or falling of the reference value. *1, *Not available with MR8990, *3
	Specifying events	Specifying events (1 to 4000) Counts the number of times conditions were fulfilled for each trigger source. Triggering occurs when the set number of times is reached. *Not available when the trigger conditions are set to AND
		 *1: Disabled when sampling rate is set to 200 MS/s. *2: Not available with MR8990 or 8970 *3: Not available with envelope setting
Logic trigger	Pattern trigger using	1, 0, or x
CAN trigger	The instrument is triggered when receiving a specific data frame, error frame, or remote frame. When a data frame is chosen, the instrument can be triggered by comparing between bits in specific byte positions.	
Interval trigger	Recording possible at The trigger condition Afterwards, the trigg	specified measuring intervals (hours, minutes, or seconds) as are fulfilled when the measuring process starts. er conditions are met at the set measuring intervals.
Trigger filter	Normal Envelope	OFF, 10, 20, 50, 100, 150, 200, 250, 500, 1000, 2000, 5000, 10,000 samples OFF, 1 ms, 10 ms
Trigger level setting resolution	1 LSB	
Pre-trigger	0% to 100% (any val time for pre-trigger	ue set in 1% steps available), displaying the recording
Post-trigger	0% to 40%, displayir	ng the recording time for post-trigger
Trigger priority	ON / OFF	
Trigger mark	Displays trigger mar	ks for the positions where triggers are set.
Waveform monitoring	Displays the wavefor	rm monitor in the trigger standby state. (The display can
display	be turned off.)	
Waveform screen	1	1 2 3 4 6 8 9 16 screens
	Time-domain waveform representation	(Up to 64 channels can be displayed on each sheet.) (Every channel can be set to be displayed on multiple sheets.)
Display format	XY composite waveform display	 2, 4 screens, combination of time-series waveforms and XY (2 screens) (Unsettable when envelope is enabled) (Up to eight XY composite waveforms can be set) (Multiple sheets can display the same composite waveforms)
	FFT display	1, 2, 4 screens, combination of time-series waveforms and FFT representation (1, 2, 4 screens)
Sheet function	Up to 16 sheets	*The display format can be selected for each sheet.
Zoom display	ON / OFF (Waveforms	are displayed in chronological order in the top part of the reas the zoomed waveforms are displayed in the bottom part)
Full screen display	Displays waveforms	over the entire waveform screen.
Grid anchoring mode	The waveform display	ay position can be defined by specifying a waveform
	Waveform color	Fixed colors (32 colors)
	Interpolation	Linear
	Variable display Waveform display	Always enabled when grid anchoring mode is disabled.
	magnification	100x to 1/10x (available when grid anchoring mode is enabled)
Waveform display	Waveform display zerodisplay position	In increments of 1 percent point (available when grid anchoring mode is enabled)
	Vernier	Adjustable input waveform
	Grid	OFF / ON
	Logic display width	Wide / Standard / Narrow
	Waveform inversion	Displays waveforms upside down. *Not available with 8967, 8970, and 8973
Enlarge / Reduce	Allows you to adjust	the zoom ratio as necessary by pinching in or out.(when
Waveform scrolling	Scroll left or right by	swiping the screen and scroll back while measuring.
Roll display mode	Always displays the The drawing start po *The roll cannot be o	latest data by following the measuring process. sition (left or right edge) can be selected. lisplayed when the overlay function is turned on.
Waveform monitoring function	ON / OFF (The monit	tor can also be displayed in the trigger standby state.)
Overlay	The OFF, automatic, *The roll cannot be o	or manual option can be selected. iisplayed when the overlay function is turned on.

	Tracing cursor	Up to 8 cursors can be displayed. *Displays potential, time from trigger, time difference between cursors, and potential difference.
	Horizontal cursor	Up to 8 cursors can be displayed.
Cursor	Gauge	Up to 8 gauges can be displayed.
	Specifying segments	Segment cursor 1 / Segment cursor 2 *Specifies the calculation range, saving range, and search range.
	Jump	Tap the screen to jump to the specified location.
Event mark	Input available durin Use the start button	g the measuring process (up to 10000 marks) or external input terminal for input.

(The two calculations by the able before new functional cases and the set of the set
Real-time waveform	n processing *	g the calculation number for simple averaging will be unavailable.) Option to be specified upon order (Order code: MR6000-01)
Calculation targets	Measurement chan U8974, MR8990 (*) *The MR8990 DVM UNI	nels in 8966, 8967, 8968, U8969, 8970, 8971, 8972, 8973, U8975, U8976, U8977, U8978, U8979 I Derforms calculations only for the top 16 bits of the 24-bit AD resolution.
Calculation update rate	10 M, 1 M, 100 k, 1 *Up to 8 calculation cannot be set with	0 k, 1 k, 100, 10, 1 [S/s] is can be set for 10 MS/s. *Some types of calculations certain calculation update rates.
Calculation delay	Calculation update rate Calculation delay Add the delay times selected for calculati	10 MS/s 1 MS/s 10 kS/s 10 kS/s or less 6.2 or 6.3 us 5 us 20 us Calculation update rate period listed below when real-time waveform processing channels are on. 10 MS/s 10 kS/s or less
	Added calculation delay	10 kg/s 1 kg/s 10
Calculation type	equations, monomials, FIR (LPF / HPF / BPF / E	polynomial addition and subtraction, differentiation, integrals, integration, SSF), IIR (LPF / HPF / BPF / BSF), moving average, delay device
Maximum number of calculations	8	ope setting, not available simultaneously with real-time saving
Frequency range	500 mHz to 100 MH	dz (sampling rate x0.5), external sampling
Number of sampling points	1 k, 2 k, 5 k, 10 k, 2	0 k, 50 k, 100 k
Anti-aliasing filter	AAF (8968, U8979) waveform processi	, waveform processing LPF filter (FIR, IIR), real-time ng LPF filter (FIR, IIR)
Calculation targets	Analog waveform, wa	veform processing results, real-time waveform processing results
Analyzed data	Newly loaded Memory Linear spectrum*, R	Data newly measured by pressing START key Data measured most recently or data loaded from media MS spectrum*, power spectrum*, 1CH phase spectrum, cross
FFT analysis modes	power spectrum, tra *Total harmonic dist	Insfer function, coherence function, 2CH phase spectrum ortion (THD) is displayed with a cursor set to on.
Display scale Peak value display	Linear scale, log sc OFE local maxima	ale maximum value
Averaging function	Simple averaging, e 2 to 10,000 times)	exponential averaging, peak hold (arbitrary setting from
Calculation execution button	Execution button di	splayed in screen
Memory division	1024 blocks	
Block search	Search from the da	ta that is saved in divided memory block.
Reference block	Superimposes wave The waveforms pre previously measure	eforms of a specific block. sently displayed on the screen can be compared with id waveform data that is loaded in the reference block.
Waveform search	Saves entire range	of data in all diocks last measured
	Trigger	Level, window-in, window-out Logic trigger search is available when a logic channel is selected as the targeted channel. "Logic trigger search is not available with envelope setting.
Search method	Peak	Maximum value, minimum value, local maxima, local minima Histogram, standard deviation "Select whether to compare each value to the reference waveform or to the directly preceding waveform. "Dischlock with panylong setting."
	Jump	Event mark, cursor, time (absolute time, relative time, or time specified by the number of points), trigger point, search mark
Search range	Specifying segments	Select either the range specified for segment 1 or the one specified for segment 2.
Number of searches	Specifiable (Up to	1000 data points)
Search position	Cursor can be mov	ed to, and event marks can be set at, search positions.
Continuous search	After a search is ex beyond the specific point is continued for	ecuted, if there are more search hits in the search range ad number, the waveform data following the last search or searching.
Display method	Specify a search lo	cation to display the data.
CAN measurement		
	Supported products	Vector Informatik VN1610, VN1630A, VN1640 Compatible transceivers: CANpiggy 1051cap/1057Gcap
	Connector Number of	USB 1 (If multiple devices are connected, only the first detected
	connectable devices	interface will be available for use.)
	CAN ports	When 4 transceivers are affixed to VN1630A or VN1640 (Not available simultaneously with LIN measurement)
Interface	Baud rate	33.3 k, 50 k, 83.3 k, 100 k, 125 k, 250 k, 500 k, 1 M [baud] 33.3 k, 50 k, 83.3 k, 100 k, 125 k, 250 k, 500 k,
	Data rate	1 M, 2 M, 4 M [baud] *Setting available only when CAN FD is selected.
	Acceptance filter	11-bit (standard), 29-bit (extended) Block setting is available for all frames.
	Storage memory	CAN frame data inputted in synchronism with the start of measurement can be stored in the build-in memory (up to
	Monitor function	10 MB). Data is cleared every time measurement starts.
		Signal number: From 1 Signal name: up to 32 characters
Signal settings	Definition settings	ID: 0 to 1FFFFFFF Start bit: 0 to 511 Bit length: 1 to 64 Byte order: Big / Little Data type: Signed, Unsigned, Float, Double Conversion into physical quantity:Conversion using
	Number of signals	conversion ratio and offset Up to 300
	Input method	Direct entry on the instrument's display Import of a CANdb file (.DBC) or Hioki CAN definition data
Real-time waveform	Number of displayed	file (.CDF)
display	waveforms Configuration	Select the arithmetic expression CAN/LIN in the waveform
Waveform display	method Number of	numbers.
	waverorms that can be displayed	

	Timing	Key S1, Key S2, Start, Trigger, Reply, Pass, Fail, Error
	Transmit ID	
	Types	Standard CAN, extended CAN, standard CAN FD, extended
Transmit function	DLC	CAN FD, standard CAN remote, extended CAN remote
	Delay	0 to 10000 ms
	Periodic transmit	Repeated transmission (select key S1, key S2, or start)
	Interval	Transmit interval can be set for regular transmission: 1 to 10000 ms
LIN measurement	Response ID	to to TEFEFFFFF (in timing is set to response)
	Conforming standard	LIN
	Supported	VN1611, VN1630A (Vector Informatik)
	Connector	USB
	Number of	One
	interfaces	(If more than one interface is connected, only the one detected first can be used.)
Interface	Number of input	Up to four (C1 to C4)
Interface	LIN ports	(Not available simultaneously with CAN / CAN FD
	Baud rate	measurement) 2400 9600 14400 19200 (bps)
	LIN protocol	1.3 / 2.0 / 2.1 / 2.2
	Storage memory	LIN packet data inputted in sync with the start of
	Storage memory	10 MB). Data will be cleared every time measurement starts.
	Monitor function	Yes
		Signal number: From 1 Signal name: Up to 32 characters
		ID: 0 to 63 Start bit: 0 to 63
	Definition	Bit length: 1 to 64 Byte order: Big Little
Signal configuration	Comgulation	Data type: Signed, Unsigned, Float, Double
		Conversion into physical quantity: Conversion using
	Number of definitions	conversion ratio and offset
	that can be registered	Up to 300
Deal time	Input method	Direct entry using the instrument's display Loading of an LDF file
display	waveforms	Up to 64
	How to configure	Select the arithmetic expression CAN/LIN in the waveform
display	Number of displayed	Calculation setting and specify signals using signal numbers.
	waveforms	0p to 16
*Details of the hardware	on functions comply with	MR8790, MR8791 and U8793 units.
Waveform generation	By the respective g	eneration units of MR8790, MR8791 and U8793
mode	Signal generation	On (generation), off (halt)
Waveform generation		Synchronization of all channels with one another: Outputs
control	Synchronized control	generated signals via all channels in sync with one another. Synchronization with measurement: Outputs signals in sync with
		the start and stop of measurement.

Option Specifications (sold separately)

Dimensions/mass: approx. 106 mm (4.17 in.) W x 19.8 mm (0.78 in.) H x 196.5 mm (7.74 in.) D, approx. 280 g (9.9 oz.), Accessories: None HIGH SPEED ANALOG UNIT (Accuracy at 23 ±5°C/73 ±9°F, 20 to

U8976	warm-up time and zero adjustment; Accuracy guaranteed for 1 year)
Measurement functions	No. of channels: 2, for voltage measurement
Input terminals	Isolated BNC connector (input impedance 1 M Ω , input capacitance 22 pF) Max. rated voltage to ground:1000 V AC, DC (with input isolated from the unit, the maximum voltage that can be applied between input channel and chassis and between input channels without damage)
Measurement range	100, 200, 400 mV f.s. 1, 2, 4, 10, 20, 40, 100, 200, 400 V f.s., 12 ranges AC voltage for possible measurement/display: 280 V rms Low-pass filter: 5/500/5 k/1 MHz
Measurement resolution	1/1600 of measurement range (using 12-bit A/D conversion)
Maximum sampling rate	200 MS/s (simultaneous sampling in 2 channels)
Measurement accuracy	±0.5% f.s. (with filter 5 Hz, zero position accuracy included)
Frequency characteristics	DC to 30 MHz -3 dB (with AC coupling: 7 Hz to 30 MHz -3 dB)
Input coupling	AC/DC/GND
Maximum input voltage	400 V DC (with direct input), 1000 V DC (with 9665)

Dimensions/mass: approx. 106 mm (4.17 in.) W x 19.8 mm (0.78 in.) H x 196.5 mm (7.74 in.) D, approx. 250 g (8.8 oz.), Accessories: None

ANALOG UNIT 896	6 (Accuracy at 23 ±5°C/73 ±9°F, 20 to 80% RH after 30 minutes of warm- up time and zero adjustment; Accuracy guaranteed for 1 year)
Measurement functions	No. of channels: 2, for voltage measurement
Input terminals	Isolated BNC connector (input impedance 1 M Ω , input capacitance 30 pF). Max. rated voltage to ground: 300 V AC, DC (with input isolated from the unit, the maximum voltage that can be applied between input channel and chassis and between input channels without damage)
Measurement range	100, 200, 400 mV f.s. 1, 2, 4, 10, 20, 40, 100, 200, 400 V f.s., 12 ranges AC voltage for possible measurement/display: 280 V rms Low-pass filter: 5/50/500/5 k/50 k/500 kHz
Measurement resolution	1/2000 of measurement range (using 12-bit A/D conversion)
Maximum sampling rate	20 MS/s (simultaneous sampling across 2 channels)
Measurement accuracy	±0.5% f.s. (with filter 5 Hz, zero position accuracy included)
Frequency characteristics	DC to 5 MHz -3 dB (with AC coupling: 7 Hz to 5 MHz -3 dB)
Input coupling	AC/DC/GND
Maximum input voltage	400 V DC (the maximum voltage that can be applied across input pins without damage)

Dimensions/mass: approx. 106 mm (4.17 in.) W x 19.8 mm (0.78 in.) H x 196.5 mm (7.74 in.) D, approx. 250 g (8.8 oz.), Accessories: None

4CH ANALOG UNI	TU8975 (Accurate warm-up	ey at 23 ±5°C/73 ±9°F, 20 to 80% RH after 30 minutes of time and zero adjustment; Accuracy guaranteed for 1 year)
Measurement functions	No. of channels: 4, for voltage	ge measurement
Input terminals	Isolated BNC connector (ing Max. rated voltage to groun maximum voltage that can b between input channels with	but impedance 1 M Ω , input capacitance 30 pF), d: 300 V AC, DC (with input isolated from the unit, the be applied between input channel and chassis and bout damage)
Measurement range	4, 10, 20, 40, 100, 200 V f.s AC voltage for possible mea Low-pass filter: 5/500/5 k/2	, 6 ranges asurement/display: 140 V rms 00 kHz
Measurement resolution	1/32,000 of measurement ra	inge (using 16-bit A/D conversion)
Maximum sampling rate	5 MS/s (simultaneous samp	ling in 4 channels)
Measurement accuracy	±0.1% f.s. (with filter 5 Hz, z	ero position accuracy included)
Frequency characteristics	DC to 2 MHz -3 dB	
Input coupling	DC / GND	
Maximum input voltage	200 V DC (the maximum volta	ge that can be applied across input pins without damage)

Dimensions/mass: approx. 106 mm (4.17 in.) W x 19.8 mm (0.78 in.) H x 196.5 mm (7.74 in.) D, approx. 250 g (8.8 oz.), Accessories: None

4CH ANALOG UNI	T U8978	(Accuracy at 23 $\pm5^\circ\text{C}/73$ $\pm9^\circ\text{F},$ 20 to 80% RH after 30 minutes of warm-up time and zero adjustment; Accuracy guaranteed for 1 year)
Measurement functions	No. of channels: 4,	for voltage measurement
Input terminals	Isolated BNC conn Max. rated voltage (CAT II) when com main unit, and betw	ector (input impedance 1 M Ω , input capacitance 30 pF), to ground: 30 V AC or 60V DC for direct input, 300 V AC, DC bined with the 9665 (Between each input channel and the een the input channels)
Measurement range	100, 200, 400 mV f 1, 2, 4, 10, 20, 40 V Low-pass filter: 5/5	s. f.s., 9 ranges 00/5 k/200 kHz
Measurement resolution	1/32,000 of measur	ement range (using 16-bit A/D conversion)
Maximum sampling rate	5 MS/s (simultaneo	us sampling in 4 channels)
Measurement accuracy	±0.3% f.s. (with filte	er 5 Hz, zero position accuracy included)
Frequency characteristics	DC to 2 MHz -3 dB	
Input coupling	DC / GND	
Maximum input voltage	40 V DC (with direc	t input), 400 V DC (with 9665)

Dimensions/mass: approx. 106 mm (4.17 in.) W x 19.8 mm (0.78 in.) H x 196.5 mm (7.74 in.) D, approx. 260 g (9.2 oz.), Accessories: None

Dimensions/mass: approx. 106 mm (4.17 in.) W x 19.8 mm (0.78 in.) H x 196.5 mm (7.74 in.) D, approx. 230 g (8.1 oz.), Accessories: None

Maximum sampling rate 5 MS/s (simultaneous sampling in 3 channels)

CHARGE UNIT U897	(Accuracy at 23 ±5°C/73 ±9°F, 20 to 80% RH after 30 minutes of warm- up time and zero adjustment; Accuracy guaranteed for 1 year)	
Measurement functions	No. of channels: 2, for acceleration measurement	
Input terminals	Voltage input / pre-amp embedded input: Metal BNC connector (Under voltage input: input impedance 1 MΩ, input capacitance 200 pF or less) Charge input: Miniature connector (#10-32UNF) Max. rated voltage to ground: 30 V AC or 60 V DC (with input isolated from the main unit, the maximum voltage that can be applied between input channel and chassis, and between input channels without damage) *Voltage input terminal GND and charge input terminal GND for the same channel are shared.	
Suitable transducer	Charge output type acceleration detector Pre-amp embedded acceleration detector (IEPE type)	
Measurement range Charge input (Miniature connector) Pre-amp embedded input (BNC connector)	1 (m/s ²) to 200 k (m/s ²) f.s., 12 ranges x 6 types Charge input sensitivity: 0.1 to 10 pC /(m/s ²) Pre-amp embedded sensor input sensitivity: 0.1 to 10 mV /(m/s ²) Amplitude accuracy: ±2% f.s. Frequency characteristics: 1(1.5) to 50 kHz -3 dB (charge input) Low-pass filter: 500/5 kHz Pre-amp supply power: 3.5 mA ±20%. 22 V ±5% Maximum input charge: ±500 pC (6 ranges on high sensitivity side), 50.000 pC (6 ranges on low sensitivity side)	
Measurement range Voltage input (BNC connector)	10 mV to 40 V f.s., 12 ranges, DC amplitude accuracy: ±0.5% f.s. Jrement range i input (BNC stor) Low-pass filter: 5/500/5 kHz, input coupling: AC/DC/GND Maximum input voltage: 40 V DC	
Measurement resolution	1/25,000 of measurement range (using 16-bit A/D conversion)	
Maximum sampling rate	200 kS/s	
Anti-aliasing filter	Integrated filter for suppressing aliasing distortion caused by FFT processing (automatic cutoff frequency setting/OFF)	
TEDS	IEEE 1451.4 class 1 support (Support for sensor information reading and	

Dimensions/mass: approx. 106 mm (4.17 in.) W x 19.8 mm (0.78 in.) H x 196.5 mm (7.74 in.) D, approx. 250 g (8.8 oz.), Accessories: None

FREQ UNIT 8970	(Accuracy at 23 ±5°C/73 ±9°F, 20 to 80 % RH after 30 minutes of warm-up time; Accuracy guaranteed for 1 year)
Measurement functions	No. of channels: 2, for voltage input based frequency measurement, rotation, power frequency, integration, pulse duty ratio, pulse width
Input terminals	Isolated BNC connector (input impedance 1 M Ω , input capacitance 30 pF) Max. rated voltage to ground: 300 V AC, DC (with input isolated from the unit, the maximum voltage that can be applied between input channel and chassis and between input channels without damage)
Frequency mode	Measurement range: Between DC to 100 kHz (minimum pulse width 2 µs), 20 Hz to 100 kHz f.s., 8 ranges Accuracy: ±0.1% f.s. (exclude 100 kHz range), ±0.7% f.s. (100 kHz range)
Rotation mode	Measurement range: Between 0 to 2 million rotations/minute (minimum pulse width 2 µs), 2 kr/min to 2 Mr/min f.s, 7 ranges Accuracy: ±0.1% f.s. (exclude 2 Mr/min range), ±0.7% f.s. (2 Mr/min range)
Power frequency mode	Measurement range: 50 Hz (40 to 60 Hz), 60 Hz (50 to 70 Hz), 400 Hz (390 to 410 Hz), 3 ranges Accuracy: ±0.03 Hz (50, 60 Hz), ±0.1 Hz (400 Hz range)
Integration mode	Measurement range: 40 k-counts f.s. to 20 M-counts f.s. 6 ranges Accuracy: ±0.0025% f.s.
Duty ratio mode	Measurement range: Between 10 Hz to 100 kHz (minimum pulse width 2 μ s), 100% f.s. Accuracy: ±1% (10 to 10 kHz), ±4% (10 k to 100 kHz)
Pulse width mode	Measurement range: Between 2 µs to 2 s, 10 ms to 2 s f.s. Accuracy: ±0.1% f.s.
Measurement resolution	0.0025% f.s. (Integration mode), 0.01% f.s. (exclude integration, power frequency mode), 0.01 Hz (power frequency mode)
Input voltage range and threshold level	± 10 V to ± 400 V, 6 ranges, selectable threshold level at each range
Other functions	Slope, Level, Hold, Smoothing, Low-pass filter, Switchable DC/AC input coupling, Frequency dividing, Integration over-range keep/return

R&D testing and analysis Meeting the demanding requirements of a broad range of industries

Increased efficiency of inverters and improved performance of energy-saving technologies have been achieved in the power electronics, renewable energy, and automotive industries. We have drastically improved the technology used

in our Memory HiCorders, developing the MR6000 Memory HiCorder to meet the advanced demands of all industries.

Unit selection guide (18 types)

Measurement Units

Unit interchangeability The following units are compatible with the MR6000. Some units in the list are also compatible with the MEMORY HiCORDER MR8827, MR8847A, MR8740, MR8741, and MR8740-50. Please check the brochure of each product.

Measured signal	Model	Description	No. of channels	Fastest sampling	Bandwidth	A/D resolution	DC accuracy	Max. input voltage	Sensitivity (#1)	Max. sensitivity range	Isolation	Supplement
Voltage (high speed)	U8976	High-Speed Analog Unit	2 ch	200 MS/s	DC to 30 MHz	12 bits	±0.5% f.s.	400 V DC 1000 V DC (#2)	0.0625 mV	100 mV f.s.	Yes	n/a
Voltage	8966	Analog Unit	2 ch	20 MS/s	DC to 5 MHz	12 bits	±0.5% f.s.	400 V DC	0.05 mV	100 mV f.s.	Yes	n/a
Voltage (4ch)	U8975	4ch Analog Unit	4 ch	5 MS/s	DC to 2 MHz	16 bits	±0.1% f.s.	200 V DC	0.125 mV	4 V f.s.	Yes	n/a
Voltage (4ch, high resolution)	U8978	4ch Analog Unit	4 ch	5 MS/s	DC to 2 MHz	16 bits	±0.3% f.s.	40 V DC	3.125 uV	100 mV f.s.	Yes	n/a
Voltage (high resolution)	8968	High Resolution Unit	2 ch	1 MS/s	DC to 100 kHz	16 bits	±0.3% f.s.	400 V DC	3.125 uV	100 mV f.s.	Yes	with AAF
Voltage (DC, RMS)	8972	DC/RMS Unit	2 ch	1 MS/s	DC to 400 kHz	12 bits	±0.5% f.s.	400 V DC	0.05 mV	100 mV f.s.	Yes	with RMS
Voltage (high voltage)	U8974	High Voltage Unit	2 ch	1 MS/s	DC to 100 kHz	16 bits	±0.25% f.s.	1000 V DC 700 V AC	0.125 mV	4 V f.s.	Yes	n/a
Voltage (high resolution)	MR8990	Digital Voltmeter Unit	2 ch	2 ms	n/a	24 bits	±0.01% rdg. ±0.0025% f.s.	500 V DC	0.1 uV	100 mV f.s.	Yes	n/a
Current	U8977	3ch Current Unit	3ch	5 MS/s	DC to 2 MHz	16 bits	±0.3% f.s.	Current sensor only	Depends se	on current nsor	n/a	Max. 3 Units
Current	8971	Current Unit	2 ch	1 MS/s	DC to 100 kHz	12 bits	±0.65% f.s.	Current sensor only	Depends on current sensor		n/a	with RMS Max. 4 Units
Temperature	8967	Temperature Unit	2 ch	1.2 ms	DC	16 bits	Detailed reference	Thermocouples only	0.01	200°C (392°F)f.s.	Yes	n/a
Strain	U8969	Strain Unit	2 ch	200 kS/s	DC to 20 kHz	16 bits	±0.5% f.s. ±4 μ	Strain only	0.016 µ	400 µf.s.	Yes	Discontinued product 8969 can also be used
Frequency	8970	Frequency Unit	2 ch	200 kS/s	DC to 100 kHz (#3)	16 bits	n/a	400 V DC	0.002 Hz	Depends on mode	Yes	n/a
Acceleration	U8979	Charge Unit	2 ch	200 kS/s	DC to 50 kHz (DC) 1 Hz to 50 kHz (AC)	16 bits	±0.5% f.s. (Voltage) ±2.0% f.s. (Acceleration)	40 V DC	Deper accelera	nds on tion sensor	Yes	Supports TEDS
Logic	8973	Logic Unit	4 probes (16 ch)	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	Requires 9320-01, 9327 or MR9321-01
											pulse width 2 µs	

Output signal	Model	Description	No. of channels	Output function	Output voltage range	Supplement
Waveform generation	U8793	Arbitrary Waveform Generator Unit	2 ch	FG: Sine, Square, Pulse, Triangle, Ramp, DC Arbitrary waveform generation: Measurement waveform with Memory HiCorder, Waveform editted with the SP8000	-10 to 15 V	n/a
Waveform generation	MR8790	Waveform Generator Unit	4 ch	DC, Sine wave (output frequency range: 1 Hz to 20 kHz)	-10 to 10 V	n/a
Pulse generation	MR8791	Pulse Generator Unit	8 ch	Pulse output: frequency is 0.1 Hz to 20 kHz Logic output: output voltage level is 0 V to 5 V, Open collector output	Output terminal Connector: D-sub, half-pitch, 50-pin	n/a
