30 MHz – 3000 MHz Hybrid Measurement Antenna

1 Introduction

The TBMA8 is an affordable hybrid measurement antenna, a combination of a biconical antenna with a logarithmic periodic antenna, covering a frequency range of 30 MHz up to 3 GHz, targeting radiated emission EMC pre-compliance testing.

The TBMA8 is characterized from 30 MHz to 3000 MHz and has VSWR and antenna factor values typical for hybrid measurement antennas.

2 Product overview

The TBMA8 is an average sized hybrid antenna, with its radiating elements and supporting booms made from aluminum alloy. It is equipped with a standard female N-connector and comes together with two triangular bowtie elements. The antenna provides a 20mm diameter mounting shaft (tube). An alternative, tiltable mounting element and tripods are available as optional accessories.

The TBMA8 is shipped in a robust carrying case.
